

## Soil-related Sustainable Development Goals: Transitions are needed! But how to close the gap between societal needs and scientific opinions?

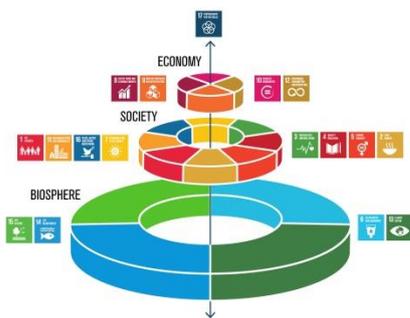

Organizers:

Margot de Cleen, Ministry of Infrastructure and Water Management, Rijkswaterstaat;

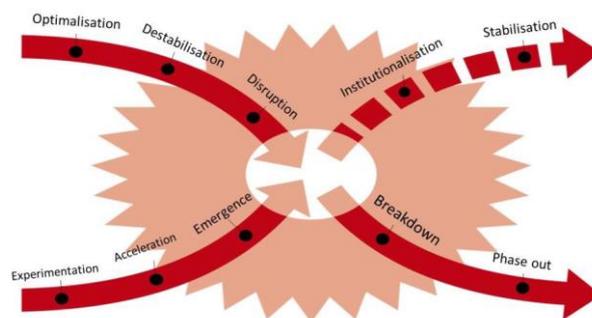

Co Molenaar, Ministry of Infrastructure and Water Management, Rijkswaterstaat;

Sophie Buchel, Drift for Transition (tbc)

The sustainable development goals (SDGs) are our joint societal challenges. Social, economic and ecologic goals are intermutually connected. Therefore social and economic goals cannot be achieved without a healthy soil-water-system and neither can a healthy soil-water-system be achieved without a healthy society and economy. To achieve SDGs transitions such as a transition towards a circular economy, sustainable energy, circular agriculture or climate proof cities are essential. Policy makers want to influence these transitions. But how do you influence a transition? What do you need to know about a transition and what is the role of policy makers, scientists and other actors. Come and learn more about transitions and find out how your knowledge and expertise can be made to measure and achieve maximum impact!
